## 2011 QUALIFYING VEHICLES FOR FUEL-EFFICIENT AND LOW-EMITTING PARKING\*

### LEGEND AND NOTES

•\* Low emitting and fuel efficient vehicles are defined as vehicles that have achieved a minimum green score of 40 on the American Council for an Energy Efficient Economy (ACEEE) annual vehicle rating. All models are given a numeric (green) score based on their overall environmental impact. The higher the number, the more environmentally friendly the car or truck. Green Scores can be compared across all classes. Please see [www.greencars.com](http://www.greencars.com) for more information.

#### • UNDERSTANDING EMISSION STANDARDS:

Just as the same model vehicle can be purchased with different sized engines or with a manual or automatic transmission, vehicles can be purchased to meet different emission standards depending on the state of purchase. There are two standards being used today in the United States, the Federal Emission Standards and the California Low-Emission Vehicle standards. States that currently adhere to the California Standards are CA, NY, MA, VT, ME. Bordering states can also special order vehicles that meet the CALEV standards.

An LEV produces fewer emissions than the average vehicle on the road. This would have been a simple explanation just five years ago, but increased regulations and new power plant technologies have led to the creation of several new categories of low-emission vehicles that have increasingly stringent standards. California, long the nationwide leader in toughening emission standards, created the CAL LEV (California Low-Emission Vehicle) program and established specific standards. As more states followed California's lead, the following definitions have gradually become accepted across the nation:

Tier 2 bin # - All vehicles sold in the U.S. must meet this (went in to effect in 2004). The Bin # ranges from 1 to 10, with 1 being the cleanest (Zero Emission Vehicle) and 10 being the dirtiest.

- TLEV – Transitional Low-Emission Vehicle. Early standard, phased out in 2004.
- LEV – Low-Emission Vehicle. This standard was the required average for all light vehicles sold nationwide by 2001. (Since it is an average, not all vehicles meet this standard).
- ULEV – Ultra-Low-Emission Vehicle. Vehicles with this designation are 50% cleaner than the average new vehicle.
- SULEV – Super Ultra-Low-Emission Vehicle. Vehicles with this designation are 90% cleaner than the average new vehicle.
- PZEV – Partial Zero-Emission Vehicle. Vehicles with zero evaporative emissions idle cleaner than the average new vehicle at idle.
- AT PZEV – Advanced Technology PZEV. Compressed natural-gas or hybrid vehicles that meet PZEV standards.
- ZEV – Zero-Emissions Vehicle. Electric and hydrogen fuel cell vehicles that have zero harmful tailpipe emissions.

Low Emission Vehicles that meet Tier II emission standards are appended with a "II", such as ULEV II.
